

Evidence of 2022 Montana Election Fraud?

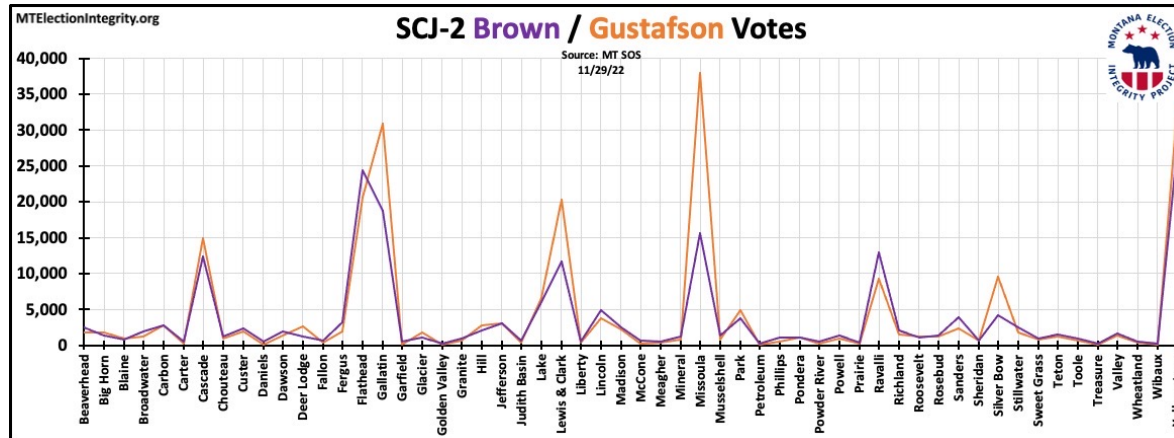

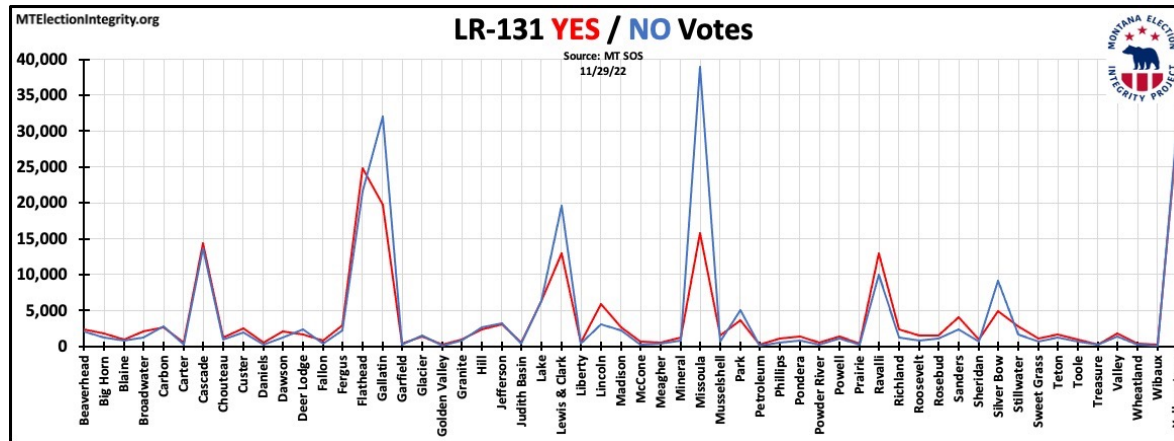

LR-131 to protect newborns failed

SCJ-2. Brown lost

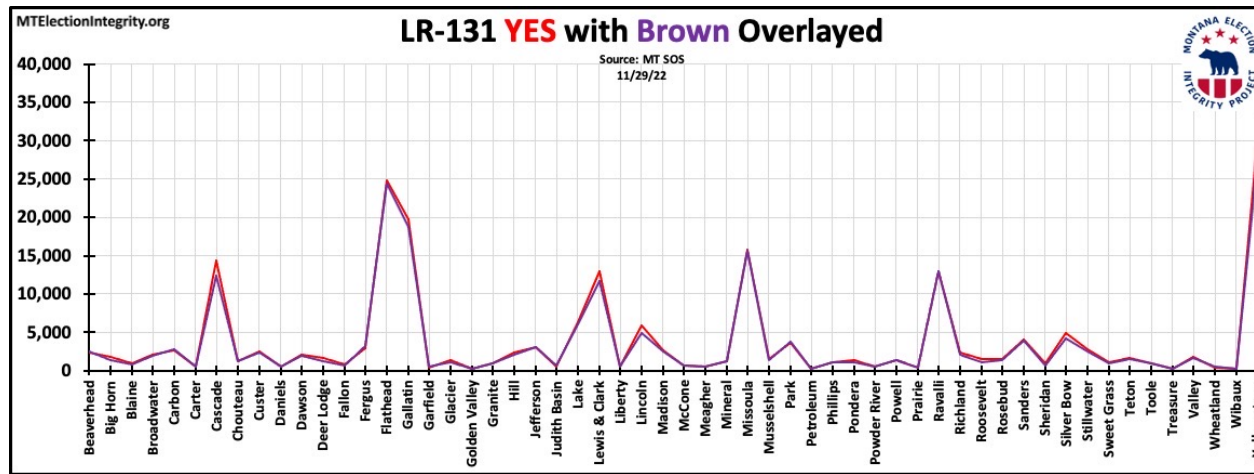

Think these two graphs look alike?

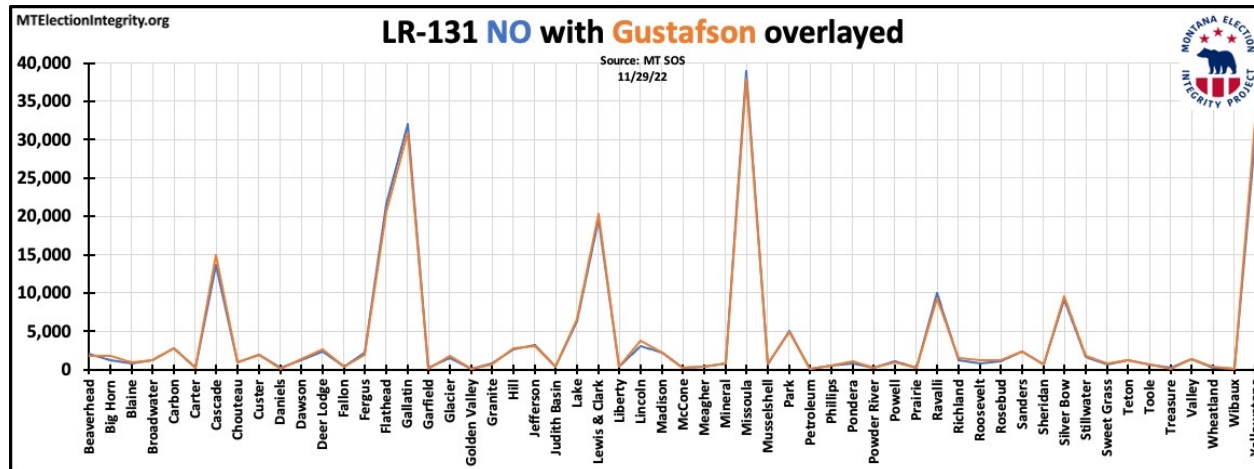

Now overlay the votes from the two different races:

Correlation coefficient
R = +0.99832877

Correlation coefficient
R = +0.99838282

Strange 2022 Election Results

The results of the Montana Supreme Court Justice race and the LR-131 Born Alive Infant Protection Act ballot issue are impossible without machine manipulation, mail in voting and inflated voter rolls.

Who programmed the contractually protected source code on the machines? ES&S claims the machines are not connected to the internet, yet all counties' results appear to be controlled by the state or maybe China?

Who controls the voter rolls – the county or state?

MEIP 2020 Canvass Report shows 20% of the votes were invalid. Elected officials aren't curious.

The county commissioners certify the election results, and they and the county clerks sign the certificate. Will they verify under penalty of perjury that all the votes they counted came from valid county voters at valid addresses?

Results are impossible without machines.

Solution:

- Melt the machines to regain transparency
- Registration closes at minimum 30 days before elections
- No mail in ballots
- Vote in person at precincts with photo ID and address
- Hand count ballots in the precincts the same day
- Post the results on paper that night at the precinct

- Return to liberty!
